

With InfoNgen you get:

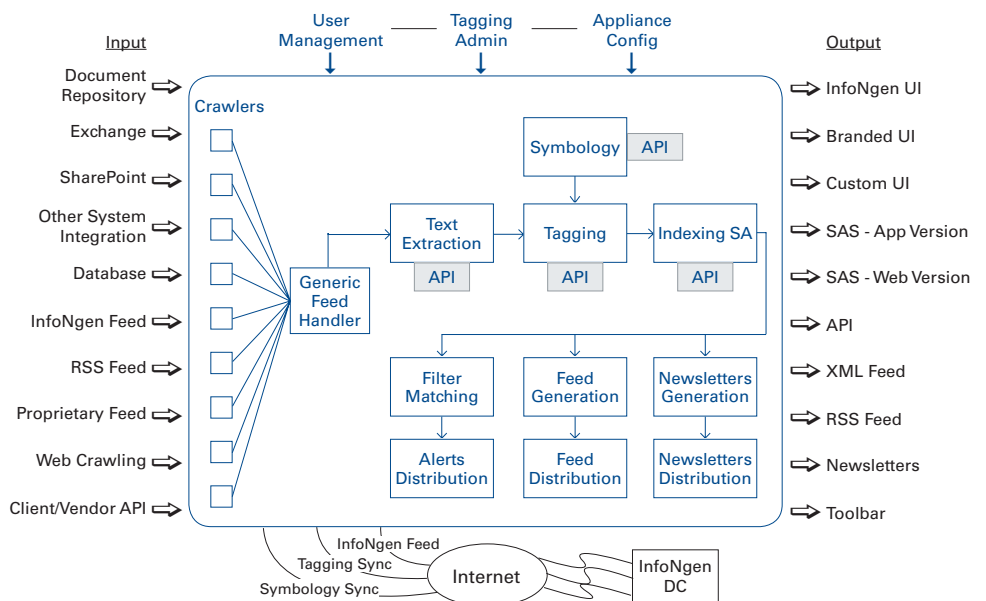

- 'Out of the box' functionality
 - » Installed, customized and up and running in weeks
 - » Minimal cost
- Real-time crawling of all content sources
 - » Email (Desktop .pst files or Microsoft Exchange server)
 - » Documents (local or network drives)
 - » Web
- Automated and consistent tagging of all inbound content
 - » InfoNgen's robust taxonomy
 - » Proprietary client-specific taxonomy
- Highly scalable, low latency search
 - » Insert times average 100 documents per second
 - » Query response times (including document based entitlements processing) average 200 milliseconds
- Single query results
 - » Seamlessly federated from all content
 - » Highly relevant to each user

One of the key challenges facing CIOs today is providing their organizations with real-time access to a normalized, searchable repository of content and data from across the enterprise. But traditional enterprise search platforms can take months to customize and years to deploy – at significant expense in both time and money.

InfoNgen's Discovery Appliance is an 'out of the box' solution that provides a highly efficient and cost-effective way to deploy enterprise-class discovery solutions. It offers all the functionality of InfoNgen's core platform, including automated semantic tagging, industry-specific taxonomies as well as clustering, faceting, sorting and paging of search results. It's horizontally scalable, distributing indexes and services across multiple servers as capacity requirements grow.

All inbound content can be automatically tagged with InfoNgen's pre-loaded taxonomy, which includes tagging patterns for over 100,000 public companies, 30,000 private companies, industries, countries as well as robust thematic concepts or topics in eight languages. It can also be tagged with proprietary client-specific taxonomy, which is created and managed – with no development or coding experience – using InfoNgen's web-based Taxonomy Wizard.

You can also leverage InfoNgen's cloud-based services to seamlessly integrate web content with secured content managed by the installed Discovery Appliance. One query returns federated results, providing a consistent, rationalized view of all the information that powers your enterprise – from content living in various silos within your organization, including email and files on desktops or network drives, to content outside your firewall, including public web and paid subscription sources.

InfoNgen is the first Discovery Engine for business, finance and information professionals that knows what's critical to you. Extracts relevant and timely information buried on the web, within emails, in desktop documents or on network drives. Identifies trends and connections between topics, companies or products that might not otherwise be apparent. And delivers results in real time.

Stop Searching. Start Discovering.™
