

Enterprise Search & Knowledge Discovery

WHY INFONGEN™ FOR ENTERPRISE SEARCH?

In large enterprises, employees often struggle to find the information they need to do their jobs because it's stored across various and siloed systems. Furthermore, an estimated 80% of new data created is unstructured, and the difficulty of marrying structured with unstructured data for more efficient search and retrieval poses problems for even the most sophisticated enterprise search systems.

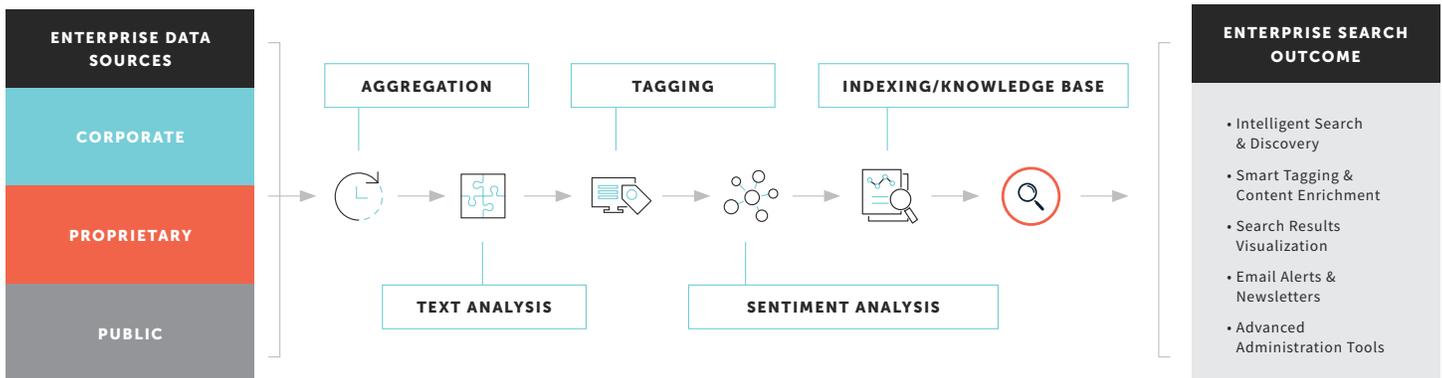

Breaking down siloes to streamline knowledge discovery in your organization, InfoNgen, an AI-powered enterprise search, text analytics and sentiment analysis tool, enables you to:

- Leverage natural language processing and machine learning to deliver automatically relevant search results as well as extract contextual metadata from content

- Effortlessly integrate your unstructured data to make it searchable via over 600,000 tags, filters and other settings
- Get insights from internal structured data and more than 200,000 carefully curated external sources to provide users with additional context on the topics they search
- Conduct advanced sentiment analysis on any entity not only as a whole, but also on its unique attributes, features and the context in which it is presented

Best of all, InfoNgen provides knowledge management professionals and enterprise users with a single source of truth for the entire organization to filter the signal from the noise.

HOW INFONGEN WORKS FOR ENTERPRISE SEARCH

InfoNgen ingests data from any number of public, private and corporate data sources and makes it searchable. The results are enhanced with a variety of tagging, indexing and analytics features to provide actionable insights.

POWERFUL FEATURES FOR KNOWLEDGE MANAGEMENT PROFESSIONALS

Out of the box, InfoNgen brings the following powerful features to your enterprise search results:

INTELLIGENT SEARCH & CONTENT DISCOVERY

Accelerate discovery with auto-suggest functionality, contextual metadata, search results visualization, advanced search and more

PREBUILT TAXONOMIES

Hit the ground running and accelerate time-to-value with taxonomies on over 600,000 topics available out of the box

TAGGING ENGINE

Leverage natural language processing and machine learning to tag, enrich and summarize content automatically

SENTIMENT ANALYSIS

Analyze sentiments related to companies, products or topics to better understand the emotional tone of the content

RELEVANCY RANKING

Set your own relevancy ranking and weighting rules based on priority, proximity, recency and more, as well as sort by popularity

KNOWLEDGE GRAPHING

Discover relationships between different objects (companies, people, documents, topics) inside of the enterprise and uncover hidden context

PROFILE CREATION

Automatically generate profiles of individuals, countries, companies and other entities to deliver additional insights from disparate structured data

DEDUPLICATION & CLUSTERING

Index, deduplicate and cluster similar content to cut through the noise and focus on what's relevant

NEWSLETTERS & CONTENT CREATION

Easily sort and curate content to create newsletters, alerts and other forms of content for specific team members and departments

Through InfoNgen's intuitive Discovery Portal, any user within your organization can benefit from these features and, as a result, make better, more agile decisions faster based on the actionable insights they find in their searches.
